

FREQUENT FALLER

“ A new line of family rides is taking amusement rides to a whole new level!

THE FREQUENT FALLER DROP COASTER has arrived.

”

THIS NEW CONCEPT COASTER

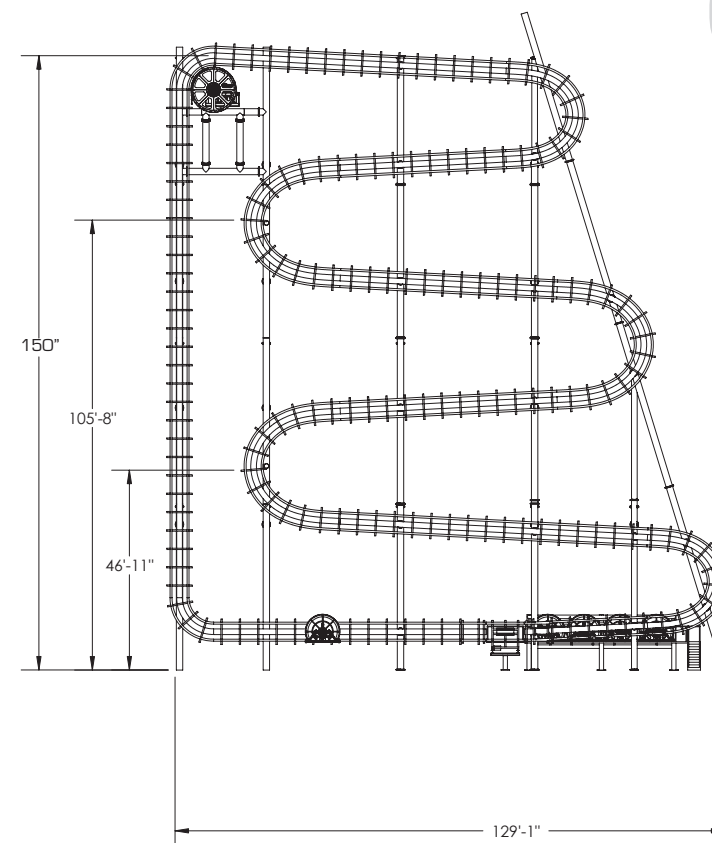

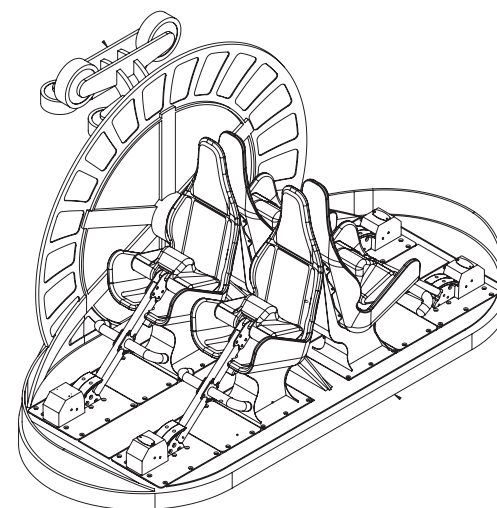

lifts 4-passenger vehicles, with two guests facing forward and two facing back, vertically to a 100, 150 or 250 foot height (or higher), and has a 960 person per hour capacity. At the top of the ride the pivoting passenger vehicle moves straight out from the vertical lift down the track and suddenly falls 20 to 30 feet at the free fall curve, then reverses the direction of travel across the next section of track where the vehicle again falls at the next curve. This is repeated again and again as the vehicle moves its way down the “frequent faller” coaster track. The falling motion of the ride causes the passenger vehicle to pivot forward and backward enhancing the excitement of the ride.

This coaster is unique because it takes up a small footprint, yet offers multiple free fall drops as it winds its way down the coaster track. Another important feature of this ride is that the passengers do not go upside-down at any point during the ride.

FREQUENT FALLER

FREQUENT FALLER

SPECIFICATIONS

100 FOOT

Ride Height: 100 Feet (30.5 meter)

Track Length: 360 Feet (110 meters)

Seat Capacity: 4 Seats per vehicle (5 vehicles)

Cycling Capacity: 600 PPH

Ride Control System: Allen-Bradley Controls.

Installation: We will provide supervision and an installation plan

Shipping: Shipping is the responsibility of the buyer

Footprint: 30 feet by 129 feet (9.1 x 21 meters)

Wheels: Large diameter, solid synthetic material.

Passenger restraints: Fully redundant, escape proof passenger restraints.

150 FOOT

Ride Height: 150 Feet (45.7 meters)

Track Length: 700 Feet (183 meters)

Seat Capacity: 4 Seats per vehicle (7 vehicles)

Cycling Capacity: 960 PPH

Ride Control System: Allen-Bradley Controls.

Footprint: 30 feet by 129 feet (9.1 x 27.4 meters)

Passenger restraints: Fully redundant, escape proof passenger restraints
