

SKY SKATER

“ A NEW line of family entertainment is taking amusement rides to a whole new level! The Sky Skater ”

THE ORIGINAL SKY SKATER

THE SKY SKATER™ is specifically designed for young families. The ride is gentle enough for small children while providing an entertaining experience for parents. Individual lap bar restraints ensure a safe ride for all. The interaction of family and friends riding together will bring countless memories, so sit back and enjoy the smiles, and the laughs. This ride is available as a mobile unit or stationary unit.

MODE OF OPERATION

A skateboard fashioned passenger cart slides back and forth across a pivoting track. Passengers are loaded at one end. When that end of the track is lifted upward, gravity moves the passenger cart toward the far end. As the cart moves along the track, sensors detect its position and reverse the pivoting motion of the track.

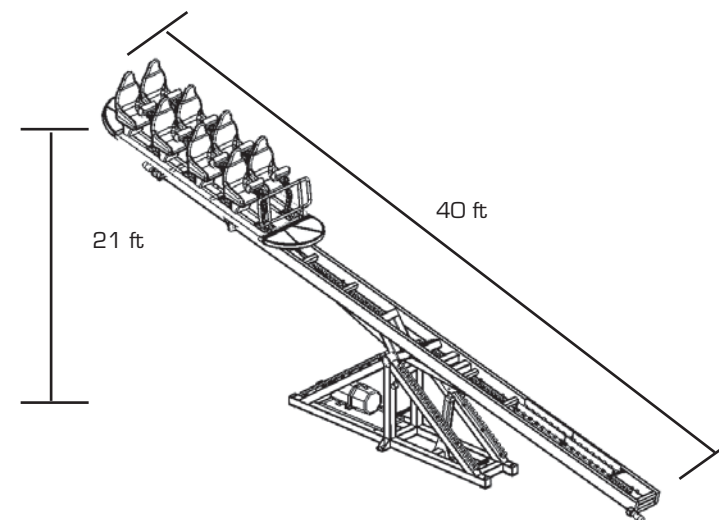

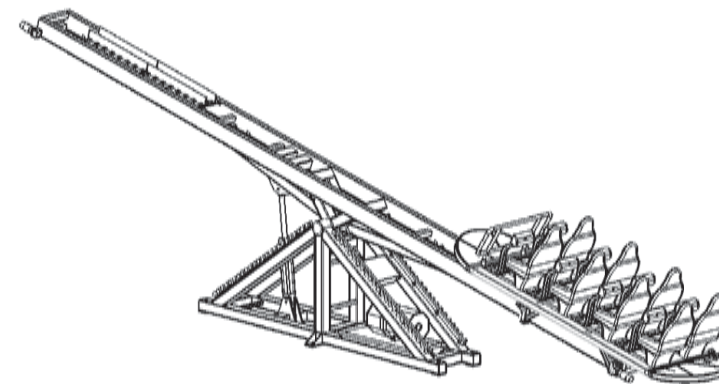

The passenger cart is equipped with permanently mounted magnetic braking system. The magnetic brakes allow for a smooth and quiet friction free feel as the passengers come towards the end of the track in each direction.
