

AIR LAUNCHED TOWERS

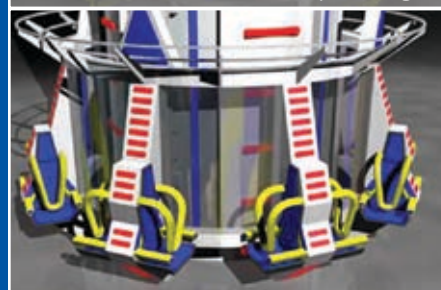

“Interactive Rides’ towers have a new artistic yet high-tech look and appeal unlike any other tower ride.”

THE TOWER RIDE

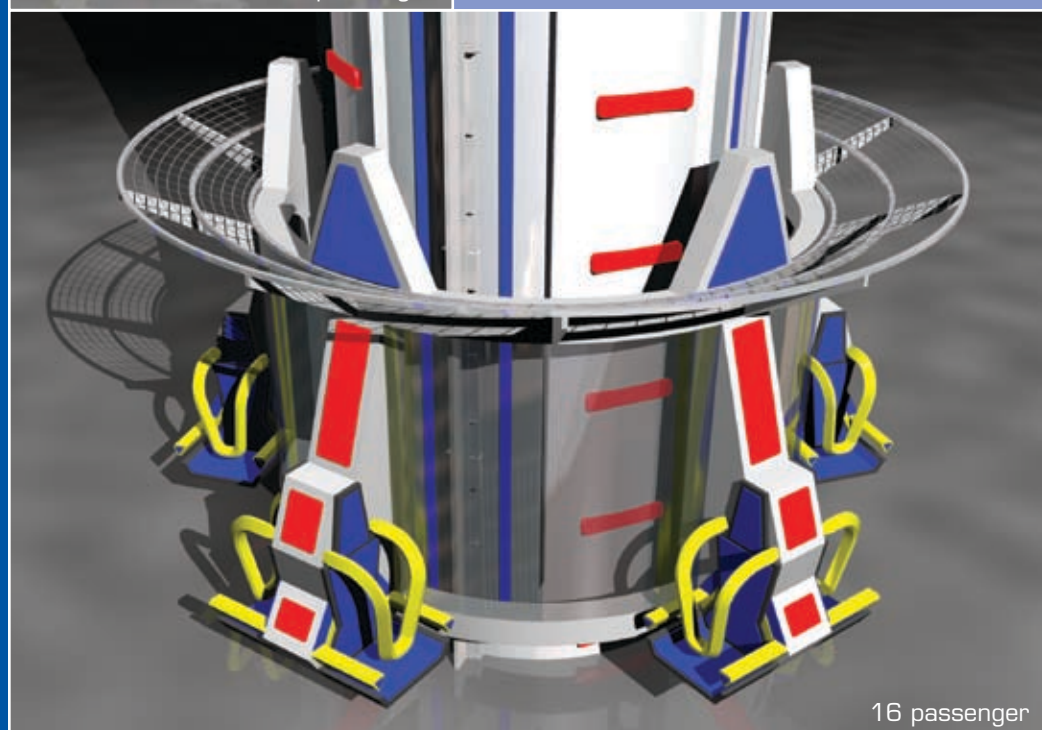

consists of 120 to 300 foot tall round towers with a surrounding passenger cart of 16 or 32 seats. The passenger cart is launched vertically, either up, down, or both creating both positive and negative g-force loads (gravitational accelerations). The tower provides a controlled and guided path for the passenger cart.

TOWERS

AIR LAUNCHED TOWERS

COST:

Lowest cost per capacity

Lower construction cost due to the single small diameter tower resulting in savings on foundations and erection time...literally saving a park hundreds of thousands of dollars.

We can place 32 seats on a single tower.

VISUAL OPERATOR INTERFACE:

The control system logs performance data from the previous ride cycle so that maintenance personnel can look at performance data and properly diagnose ride performance.

Dual processor control for increased safety. Graphical interface is easy for operators and maintenance personnel to understand.

120 FOOT TOWER RIDE - 10 SEAT

Tower Structure: 120 foot high tower track. Decorative tower structure extending the total height of the tower. Custom crown and custom ride color are included.

Seat Capacity: 10 Seats
